Within our product areas, both Aqualine and Steinsvik are leading technology providers for the aquaculture industry with a strong focus on innovation. For years, we have proved ourselves with robust products made to endure in demanding environments. Now we are taking on the task together.

With both companies working on many of the same challenges, and supplying complementary products, the collaboration will provide synergies for us and even better products for our customers. Through shared research and development focusing on innovation we will be able to supply even more complete solutions for fish farmers world-wide.

The starting point for everything we do, both together and separately, is set by the customer’s needs for more profitable solutions and the society’s need to take care of our environment. The most exciting collaboration in the aquaculture industry has already started, and will be expanded and refined in the time to come.
Two companies, a joint mission to shape the aquaculture of tomorrow.

Aqualine is a joint venture in research & development of marine engineering, mooring systems, cages and nets. Aqualine’s head office is in Trondheim, and the company has three bases and warehouses in Norway (Freya, Bømlo, Tøvik), a service station for nets at Hitra and a subsidiary in Australia. Every year, the company spends around 3–5% of the turnover on research and development.

Steinsvik is a world-leading technology supplier to the global aquaculture industry. The driving force behind the company is a desire to provide innovation and solutions for an industry in constant development, and help shape tomorrow’s aquaculture. Steinsvik offers a wide range of products in feeding technology, monitoring systems, software, water engineering and parasite control. The company has 600 employees with branches in 10 countries, and is headquartered on the west coast of Norway.
